

COMPUTER ASSISTED RECORD

MANAGEMENT SYSTEM

FOR

UNIVERSITY STAFF SCHOOL

MINNA

BY

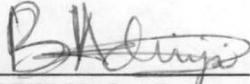

ADENIJI BOLAWA B.  
(85/350)

A PROJECT SUBMITTED TO THE DEPARTMENT OF MATHEMATIC/COMPUTER  
SCIENCE IN PARTIAL FULFILMENT OF THE AWARD OF BACHELOR OF  
TECHNOLOGY (B.TECH.) IN MATHEMATICS, COMPUTER SCIENCE  
FEDERAL UNIVERSITY OF TECHNOLOGY, MINNA.

SEPTEMBER, 1992

## DECLARATION

I hereby declare that this project has been written solely by me. It is a record of my own research work and it has not been presented before in any previous application for a first or higher Degree. All sources of information are acknowledged by means of references.

ADENIJI B. B.

This Declaration is confirmed by

H. A. BABAGBALE

Date: 4-10-92

## DEDICATION

I dedicate this project to my father MR RASHEED ADENIJI and my mother MRS. FADEKE ADENIJI and all my brothers and sisters.

## ACKNOWLEDGEMENT

With God, all things are possible. I give great thanks to God Almighty for guarding and guiding me all through the period of my stay in the University.

My sincere appreciation and thanks goes to Mr. H. A. Babagbale for his valuable criticism and supervision of this project. His understanding and co-operation has helped me to complete my project work without much difficulty.

I acknowledge Mr. T. Bamkefa - H. O. D Mathematic/Computer Science Department, Mr. Jibril of the Computer Centre, all the staff of the computer centre and also all the staff of the Maths/Computer department.

To all my wonderful friends who have made life an interesting place for me to live, I give my love and thanks, you have all stood by me through thick and thin and I pray that God repay you all in folds. These wonderful people are all my classmates, Eddy Obenny, Bayo Adeniji, Yemisi Balogun, Debo Lawal, Bolaji Sogunro and Inusa Isa.

## ABSTRACT

This project is centred on how effective and cheap computer power can be utilized for accurate, fast and efficient method of processing records, particularly in primary Schools and other Institutions as applicable. The basis of this work is projected into the future in which an integrated computer system with conglomeration of several files will be used for record processing.

Based on the feasibility study conducted, a design was developed to computerize the University Staff School. The outcome of the design was generated into a report comprising the staff record, pupils academic record and the pupils personal records.

The computer-assisted Record Management System among other things focus its attention on techniques of simplifying record collation and processing. It also causes a complex change in the structure of record handlings.

# CHAPTER ONE

## INTRODUCTION

The advent of technological revolution has brought about increase in the amount of data to be processed in shorter-time.

Though various types of automated devices were developed and introduced, the fastest and most sophisticated tool yet devised for processing record is the computer.

The project is based on how computer can be used to keep and manage records of the University Staff School, Minna Niger State. The main objective of this work is to eradicate to a large extent the manual processing of records. This is because the manual processing of records has been found to be inefficient and time consuming among other disadvantages.

In this vein, this work sets out to improve accuracy of keeping records of students and staff of University Staff School, and also to minimized loss of information through manual record processing.

The system entails the following components:

1. pupils personal records
2. pupils academic records
3. staff records.

The system has been so designed to allow the school access and retrieve their records with ease. This will in no doubt improve their record management system.

## THE UNIVERSITY STAFF SCHOOL

The Federal University of Technology Staff School, Minna was established on the 28th of January 1987 as a service arm of the University. Though it became operational on the 26th of February, 1989, the school has as its main objective the following:-

1. To serve as a moral and academic model for other schools to emulate.
2. To serve as one of the welfare services provided by the University to cater for the children of its staff.
3. To serve the community in which the University is established.

The present population of the School stands at eight hundred and one pupils and 40 teaching and non-teaching staff. The population of the school is known to increase yearly. With this yearly increase in population, it is only necessary to build a system that would cater adequately for the management of information relating to this circumstance.

The system should be such that records on each pupil and staff are kept securely and appropriately for easy retrieval and storage.

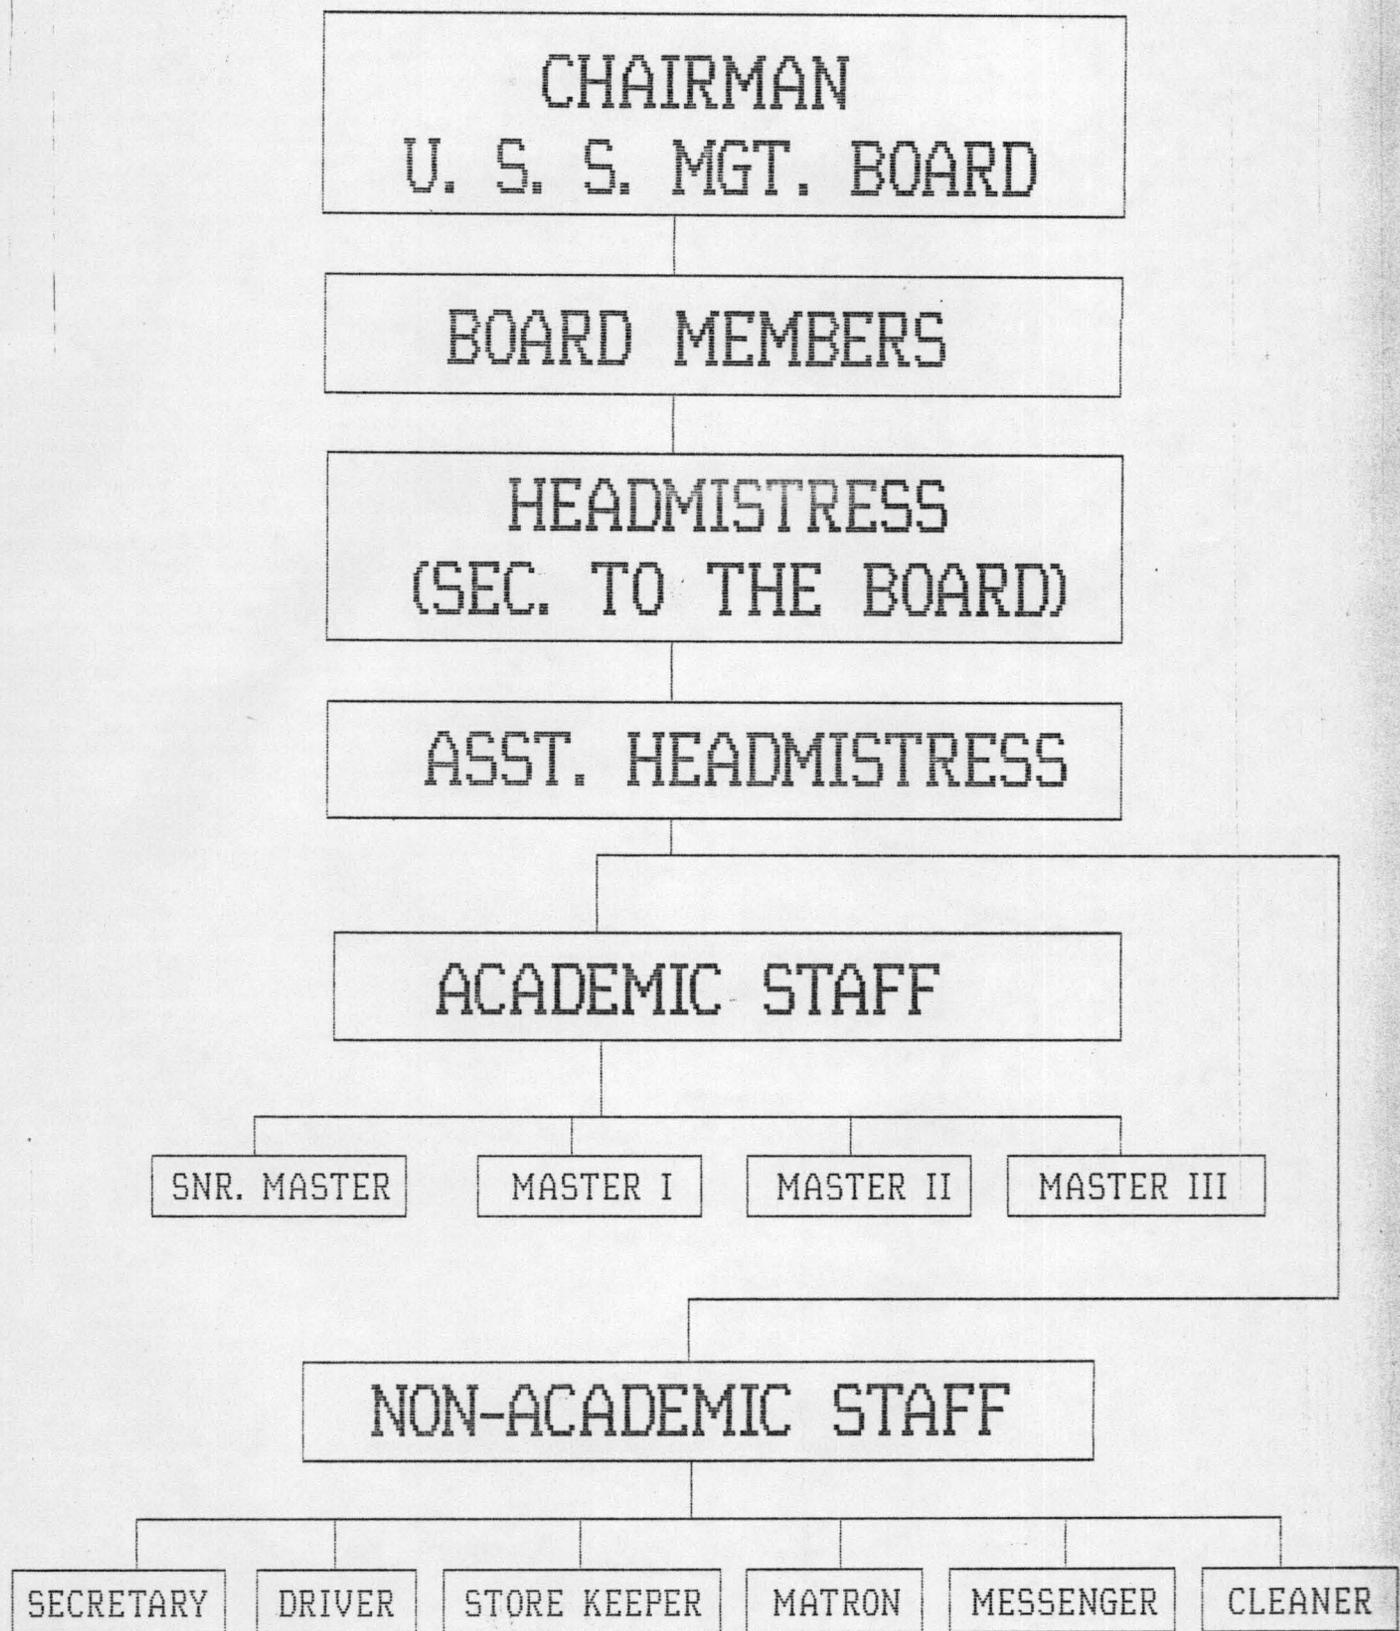

## 1:2 ORGANIZATIONAL STRUCTURE OF THE STAFF SCHOOL

The Federal University of Technology Staff School is managed by a central body called the University Staff School Management Board. This board is responsible for formulating policies and guidelines for the school. It is also responsible for making decisions concerning the general well being of the school and staff respectively.

The board is comprised of the Chairman, the Board Members, the Headmistress and some senior teachers of the school.

Simple and urgent decisions are normally attended to by the Headmistress and her teachers. The Federal University of Technology Staff School has a team of well co-ordinated and experienced management. As at now there are thirty-four teaching and six non-teaching staff in the school.

The Headmistress is the overall head and she is responsible for all the other staff. There is an assistant headmistress, who works closely with the Headmistress and acts in her place when she is not around. The teaching staff is comprised of teachers for the different subjects offered by the pupils. The non-teaching staff is comprised of the Typist, Matron, Store-keeper, Driver, Messenger and Cleaner.

*FIG. 1 ORGANISATIONAL STRUCTURE OF UNIVERSITY STAFF SCHOOL*

## CHAPTER TWO

2:1

### DESIGN DEVELOPMENT AND ANALYSIS

#### PROBLEM DEFINITION

This project which is titled "Computer-assisted record Management System" for Federal University of Technology, Minna Staff School, is formulated with a view to solving the problem of developing a system that would ease the storage and retrieval of pupils and staff records.

The main objectives of this project are:

- (a) To improve on the existing manual processing of records
- (b) To investigate, identify and implement other alternative cost effective and more efficient technique of record management.
- (c) To reduce unnecessary duplication of records.
- (d) To reduce management cost.
- (e) To minimize the loss of information through the manual processing.
- (f) To enhance the security and privacy of data and information.
- (g) To Demonstrate the application of DBASE III as a useful tool in management of information system.

## 2:2 OVERVIEW OF THE EXISTING SYSTEM

The Federal University of Technology Staff School, uses the manual method of record processing. This method is very cumbersome and time consuming. With this method, all information concerning each pupils and staff are stored in different manual files.

Information of all the pupils in the same class are kept in the same manual file. In this manual files only the academic records of the pupils are being kept. The personal details of each pupil can only be obtained from his/her application form, which are kept along with his/her admission form in the store. The manual file which holds this details are arranged according to the year and class which the pupil is admitted into.

For the staff records, individual staff employed by the school has its own personal manual file. The manual file consist of all personal details on the staff.

This method of record processing becomes very difficult to manage, especially when there are too many files to keep. Also this method does not provide facility for easy insertion and deletion of data items of a given record.

From the foregoing it is evident that the manual method certainly has many inherent defects and therefore deserves a replacement by an improved method.

### 2:3 RESEARCH METHODOLOGY

With the identification of the problems associated with the manual system, it was necessary to conduct a study into the possibility of designing an improved system that will not only meet the requirement of the school, but meet the operational targets required of it. This study was conducted by interviewing key officers of the staff school, most especially the Headmistress. Detail explanation on how the School's records are been operated was obtained.

The existing records were thoroughly examined with a view to identifying the way and manner they are being processed. The outcome of this research method provided a basis for the suggestion and designing a computer based system that can suitably replace the manual system.

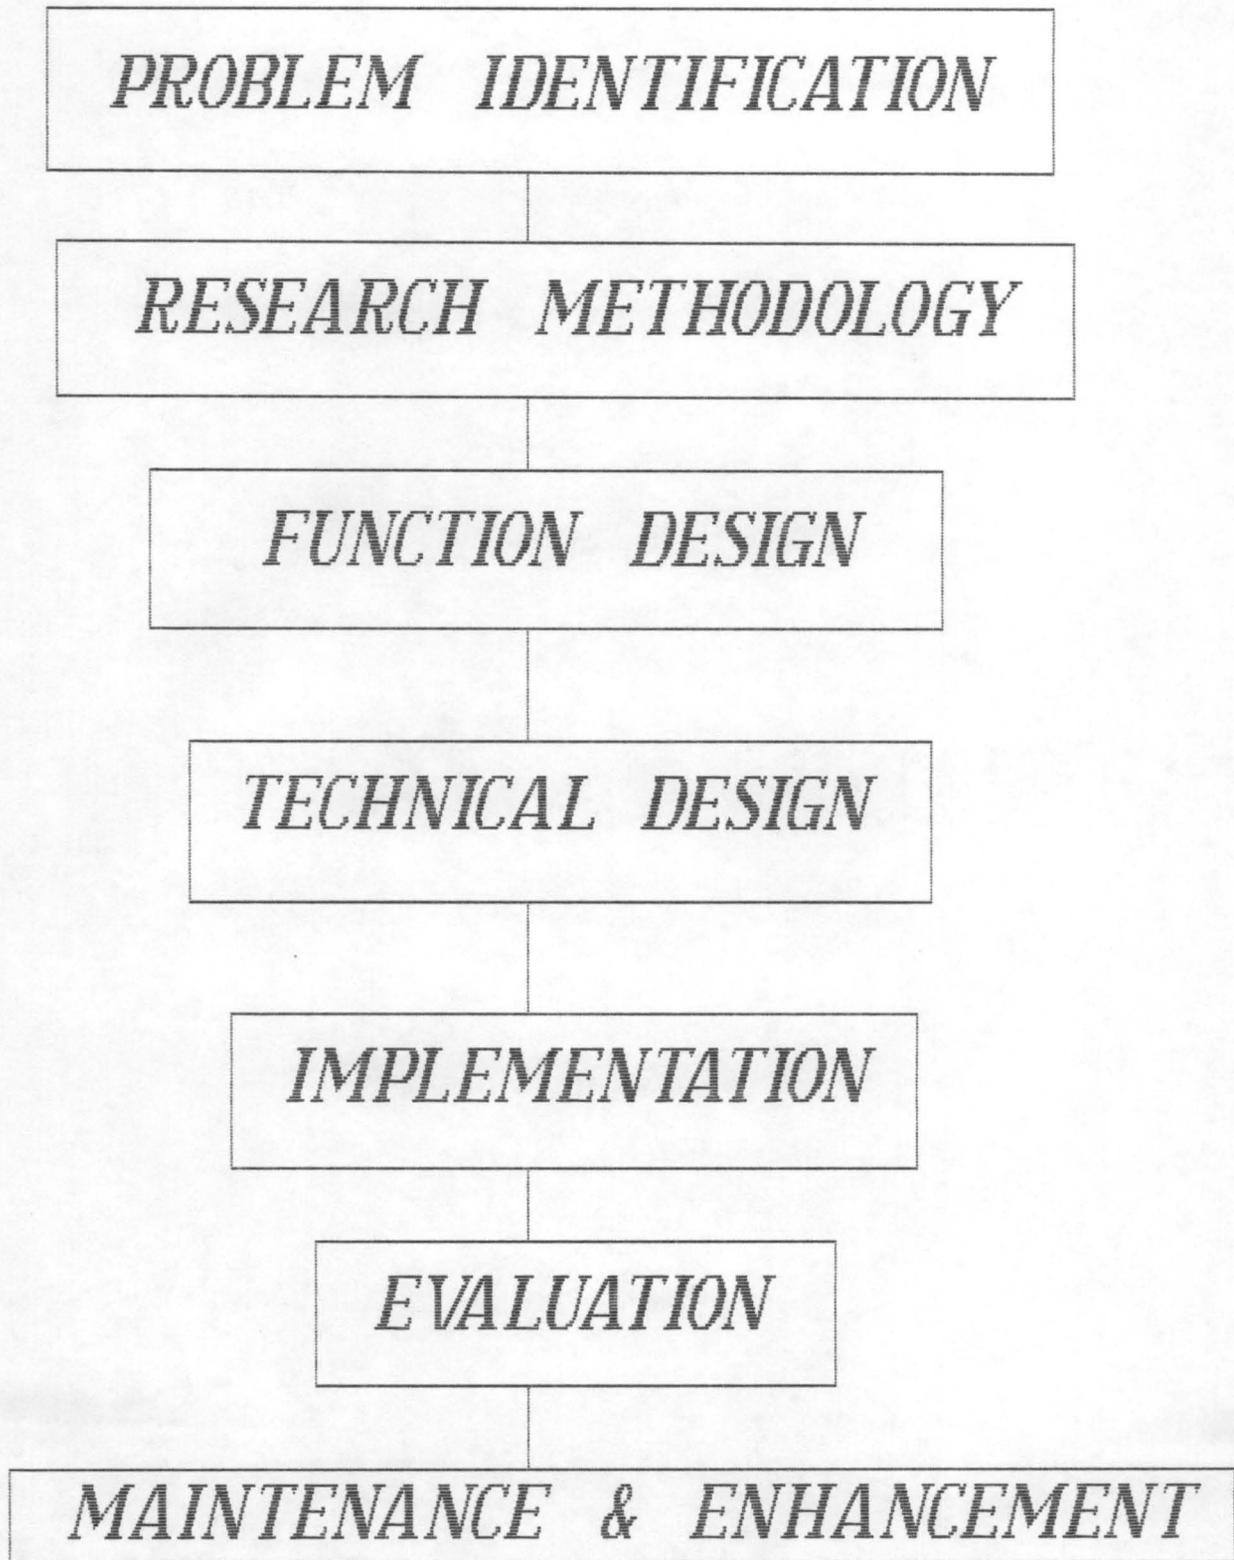

### 2:4 BENEFITS AND PURPOSE OF THE PROPOSED SYSTEM

The main purpose of this system is to eradicate, to a large extent, most of the problems and inefficiencies associated with the manual system. On implementation, this system is certain to take care of most of the lapses created by the manual system. Among other things, it would cater for the following:

- (a) Data redundancy which occurs from repeated records or from records that are no longer in use will be eradicated.
- (b) The security of records will be assured.

(c) Accuracy of information processing is satisfied by the computer.

(d) Complex operations are been handled with ease and minimum effort.

*FIG. 2 STAGES ADOPTED FOR THE SYSTEM DEVELOPMENT*

Summarily DBASE III+ has very powerful and useful features that are very commensurable with record management.

Some of this features are:

- i. Information storage and retrieval; DBase III+ handles this aspect in a more efficient manner than most other Data Base Management System (DBMS) such as Cobol and Q&A.
- ii. DBase III+ is user friendly in all ways; it is very easy to learn and understand.
- iii. Easy Debugging facilities are enhanced by DBase III+.
- iv. DBase III+ allows for customization of reports.

## CHAPTER THREE

### 3:0 COMPONENTS OF THE PROPOSED SYSTEM

The proposed system is the computerization of the records of university staff school. From the feasibility study conducted, the Federal University of Technology Staff School was found to be operating the manual system of processing records. This is made up of the staff records and the pupils records.

The proposed system is designed to improve upon the current method being used. It comprises three sub-systems, namely: pupils personal records, pupils academic records and staff records.

### 3:1 STAFF RECORDS

The staff record sub-system entails all personal information about every staff of the school. Personal information such as Age, Sex, Qualification, Rank, Employment-status, Nationality, Date of Appointment, State of Origin and Marital Status are stored. These records are classified into two categories namely: the teaching staff record and the non-teaching staff record. Both categories are basically of the same format. All the records of teaching and non-teaching staff are stored in a single file to ease retrieval and up-dating of records. This file is called STAFFREC.DBF. Reports of either of the two categories could be generated to the screen or printer as desired.

### 3:2 PUPILS PERSONAL RECORDS

The pupils personal record is made up of all the personal details on each pupil. Such details includes Age, Registration Number, Name, State of Origin, Class, Nationality and Sex. All these details are maintained in a file called PUPILS.DBF. In essence this implies that the collection of all the personal record on each and every pupil in the school is contained in one single file.

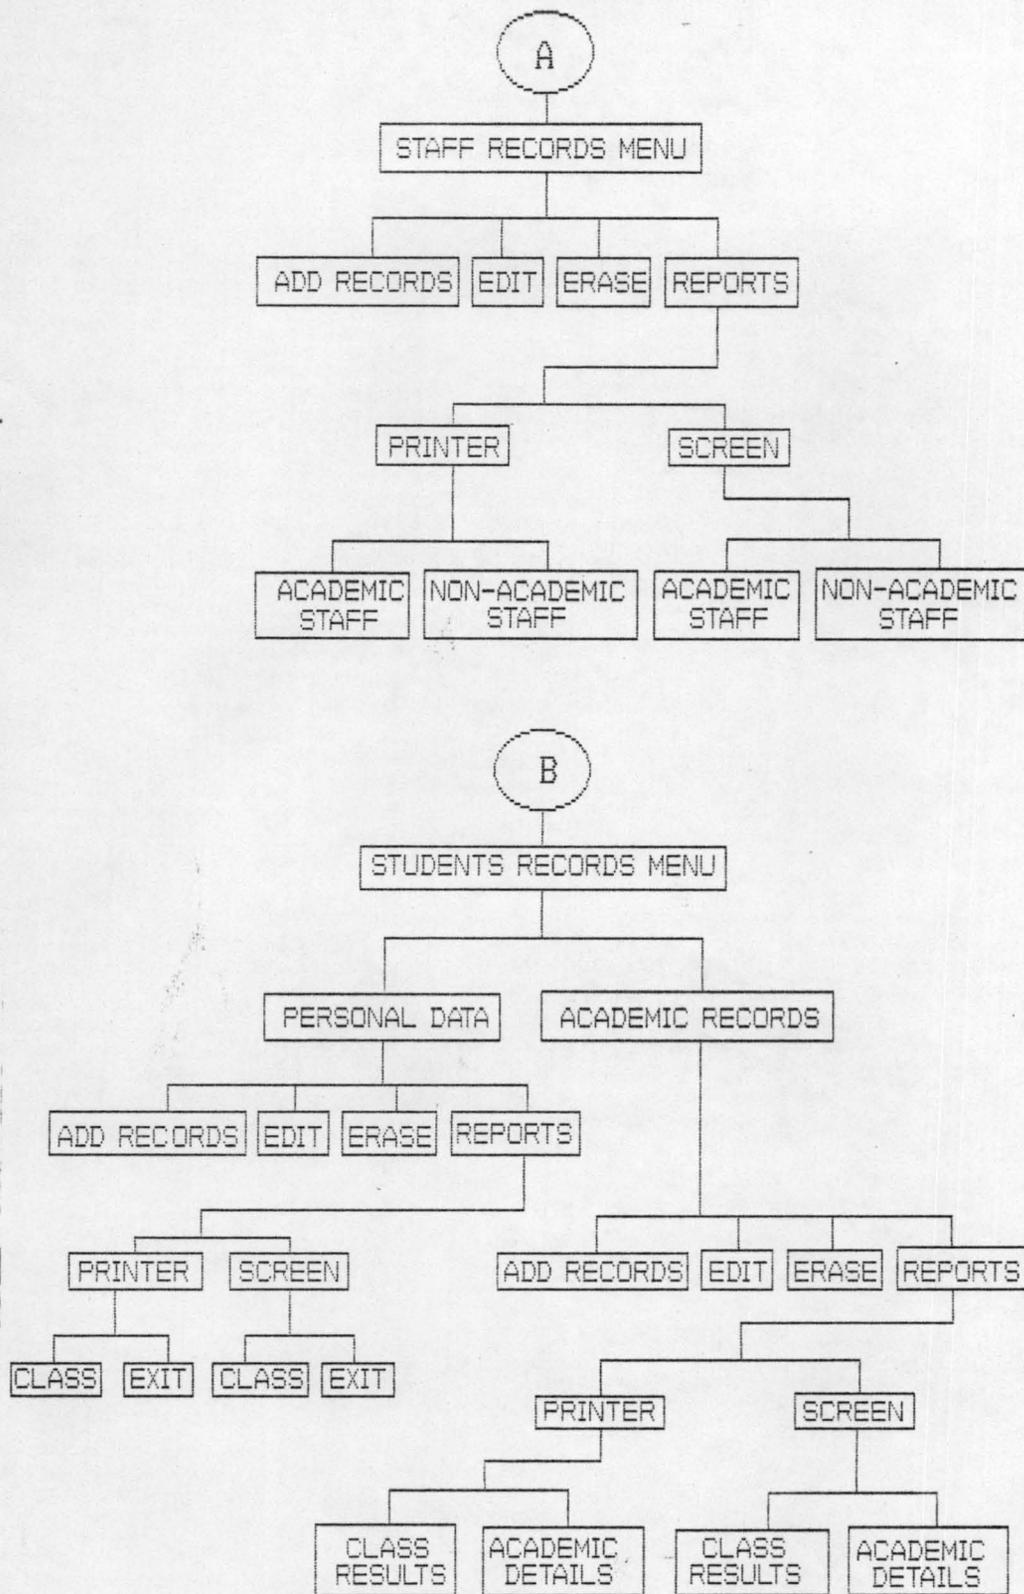

To access the information of any pupil in the school, the registration number and the class code of the pupil is supplied to the system. Information of all the pupils in a class can be displayed by supplying the class-code to the system, this way the number of pupils in a class can be known if desired.

### 3:3 PUPILS ACADEMIC RECORDS

The pupils academic record contains the academic performance of each pupil in the school. Among the details maintained by this component are continuous assessment, homeworks, test, exam-score, grade, position in class and percentage obtained by each pupil.

The academic record sub-system is designed in a way that a file is created for every subject offered in the school. In each subject file, the registration number, class and performance of all the pupils offering the particular subject are stored. This sub-system is so flexible that file of any new subject can easily be created.

All information stored in each subject file are appended to a general file. The general file serves as an input file to generate report output to the screen or printer whenever desired.

**FIG. 3** *MODULAR STRUCTURE FOR THE PROPOSED SYSTEM.*

## CHAPTER FOUR

4:0

### SYSTEMS DESIGN

The system design stage is based upon the findings obtained from the feasibility study conducted. In designing the new system, several criteria were considered, in addition to meeting the objectives of the design. Major consideration was given to the requirements of the end user. Apart from considering the user's requirements detailed specification such as flexibility, user friendliness, ease of maintainance and efficiency of the system were borne in mind.

#### 4:1 LOGICAL DESIGN OF THE PROPOSED SYSTEM

The proposed system is designed logically to comprise of:

- Input specification
- Output specification
- Processing specification.

#### 4:2 INPUT SPECIFICATION

The input specification can be described as a layout designed for data input in a machine oriented format. In all, there are three input files used by the system; they are:

- (a) STAFFREC.DBF
- (b) PUPILS.DBF

(c) SUBJECT.DBF.

The detailed specification of STAFF.REC.DBF which contains the staff records are as follows:

FIELD DESCRIPTION	FIELDNAME	FIELD TYPE	FIELDWITH
STAFF NUMBER	STAFF-NO	NUMERIC	5
STAFF SURNAME	SURNAME	CHARACTER	10
STAFF INITIALS	INITIALS	CHARACTER	6
STAFF RANK	RANK	CHARACTER	15
STAFF BIRTHDATE	BIRTH-DATE	DATE	8
STAFF SEX	SEX	CHARACTER	1
STAFF SALARY SCALE	SAL-SCALE	NUMERIC	2
STAFF APPOINT. DATE	APPT-DATE	DATE	8
STAFF QUALIFICATION	QUALIFN	CHARACTER	10
STAFF MARITAL STATUS	M-STATUS	CHARACTER	10
STAFF STATE OF ORIG.	STATE	CHARACTER	10
STAFF NATIONALITY	NATIONALITY	CHARACTER	10
STAFF EMPL. STATUS	EMP-STATUS	CHARACTER	1

The detailed specification of PUPILS.DBF is as follows:

FIELD NAME	FIELD TYPE	FIELD WIDTH
ADMIN-NO	NUMERIC	5
SURNAME	CHARACTER	10
INITIALS	CHARACTER	6
CLASS-SECT	CHARACTER	2
BIRTH-DATE	DATE	8

SEX	CHARACTER	1
ATTENDANCE	NUMERIC	4
GRAND TOTAL	NUMERIC	7
PREV-POS	NUMERIC	2
PRS-POS	NUMERIC	2
YEAR	CHARACTER	7
STATE	CHARACTER	1
NATIONALTY	CHARACTER	10

The detailed specification of SUBJECT.DBF which contains the pupils academic records is as follows:

FIELD NAME	FIELD TYPE	FIELD WIDTH
ADM-NO	NUMERIC	5
CLASS-SEC	CHARACTER	2
CONT-ASSMT	NUMERIC	5.2
EXAMS	NUMERIC	5.2
TOTAL	NUMERIC	5.2
GRADE	CHARACTER	1
POSITN	NUMERIC	2

Every subject offered is treated as a file by this design, this is to facilitate the overall achievement of a relational database for the system.

The output specification describes the format in which information will be displayed or reported for useful decision making.

The structure of staff record output is as shown below:

FIELD NAME	FIELD TYPE	FIELD WIDTH
STAFF-NO	NUMERIC	5
NAME	CHARACTER	10
RANK	CHARACTER	15
SEX	CHARACTER	1
BIRTH-DATE	DATE	8
APPT-DATE	DATE	8
QUAL	CHARACTER	10
STATE	CHARACTER	10
NATIONALITY	CHARACTER	10

A screen display of the staff record output layout is as shown below:

```
STAFF-NO  NAME RANK  SEX BIRTH-DATE APPT-DATE QUALF STATE
```

The structure of pupils record output is as shown below:

FIELD NAME	FIELD TYPE	FIELD WIDTH
NAME	CHARACTER	10
SEX	CHARACTER	1
BIRTH-DATE	DATE	8
STATE	CHARACTER	10
NATIONALITY	CHARACTER	10
PREV-POS	NUMERIC	2
PRES-POS	NUMERIC	2

The screen display of the pupils output layout is as shown below:

NAME SEX BIRTH-DATE STATE NATIONALITY PREV-POS PRES-POS

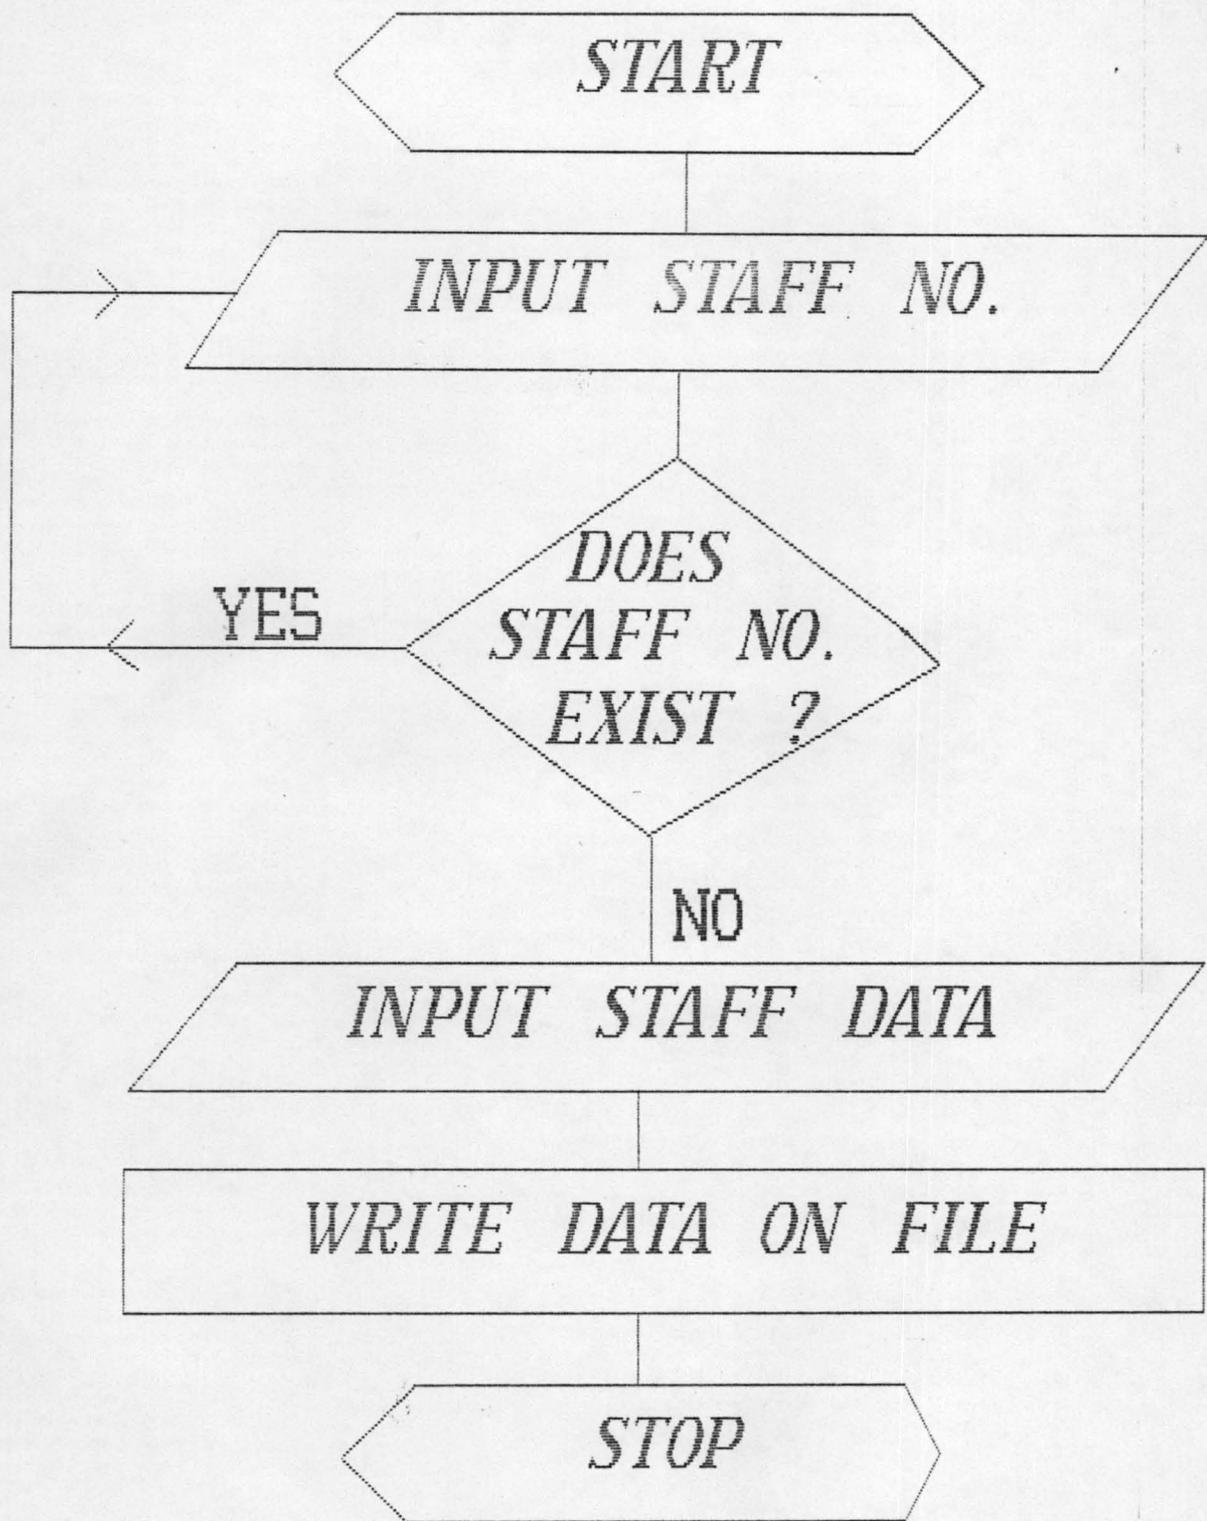

The structure of the output specification of the SUBJECT record file is as shown below:

FIELD NAME	FIELD TYPE	FIELD WIDTH
CLASS SECT	NUMERIC	5
CONT-ASSMT	NUMERIC	2
EXAMS	NUMERIC	5.2
TOTAL	NUMERIC	5.2
GRADE	CHARACTER	1
POSTN	NUMERIC	2

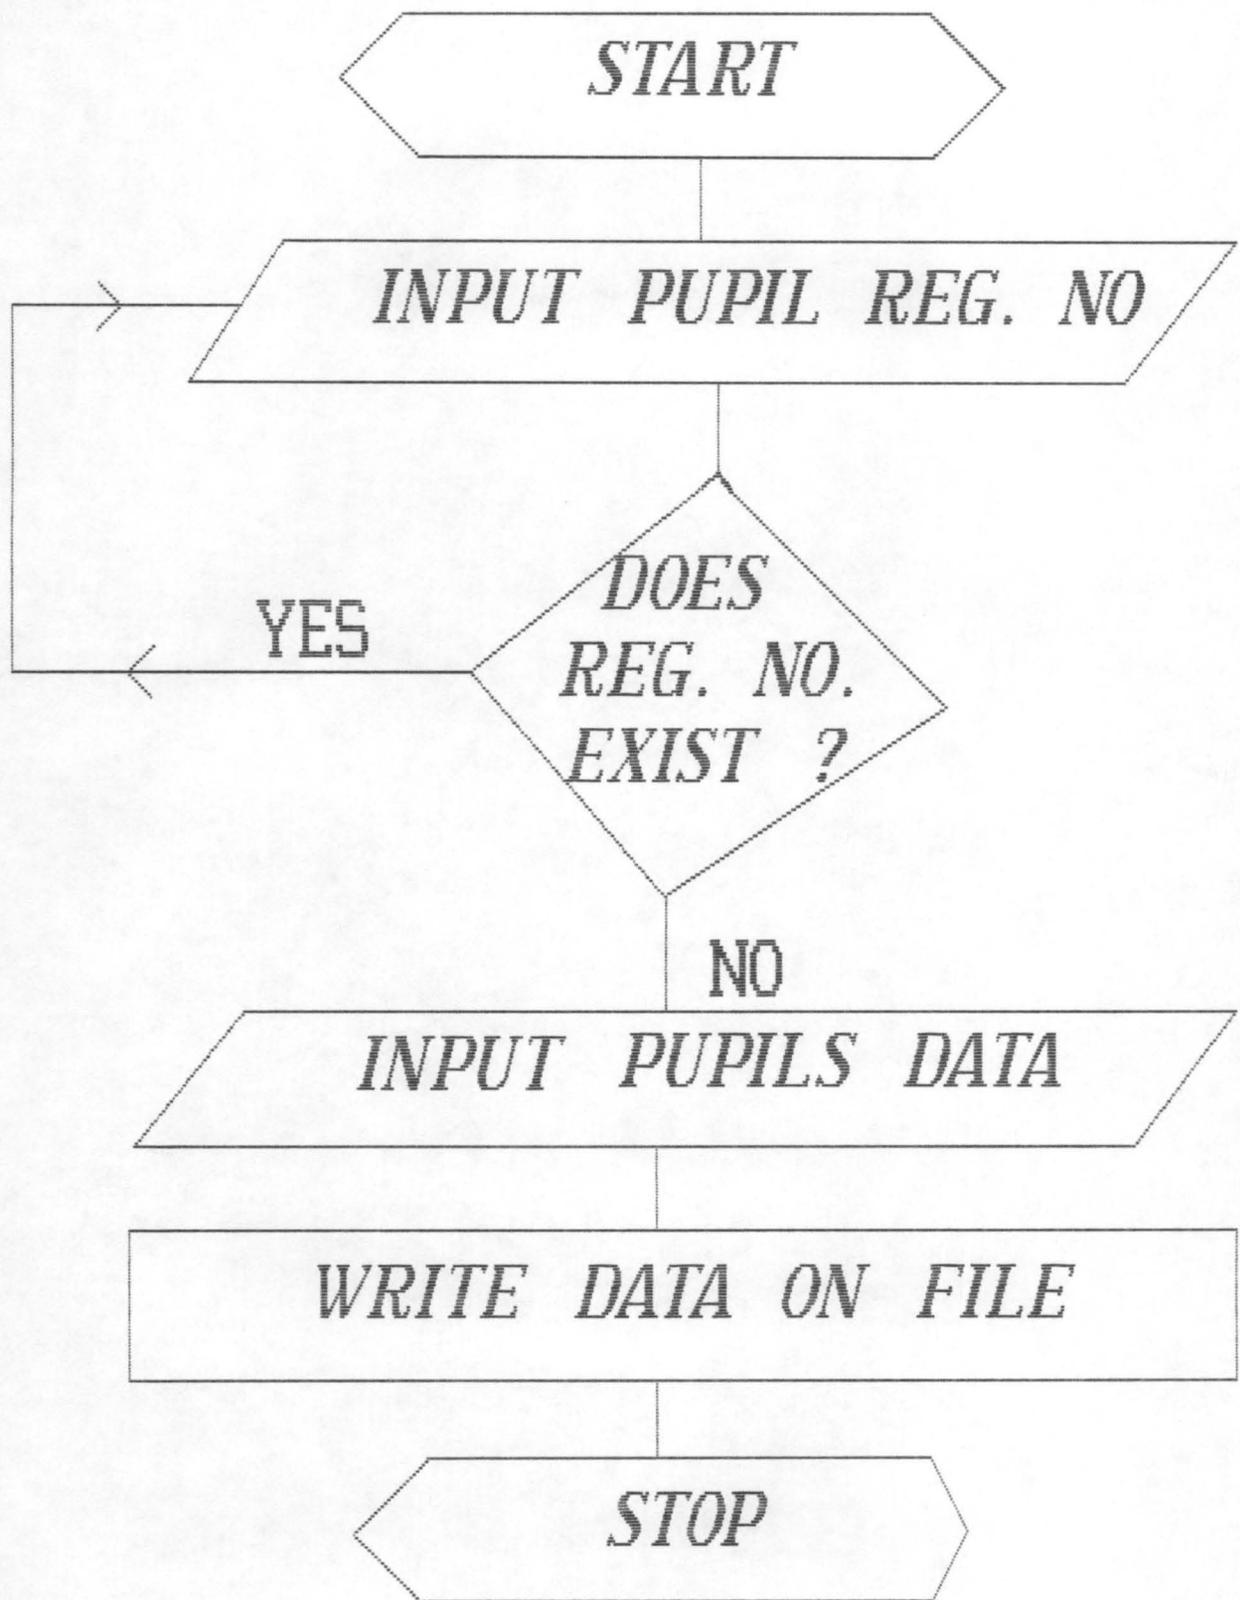

The system was so designed in a way that various media could be used for the output report. For online viewing of the records, the monitor is used to display reports. While hard copies of the reports can be generated by the use of printers attached to the computer.

#### 4:4 PROCESSING SPECIFICATION

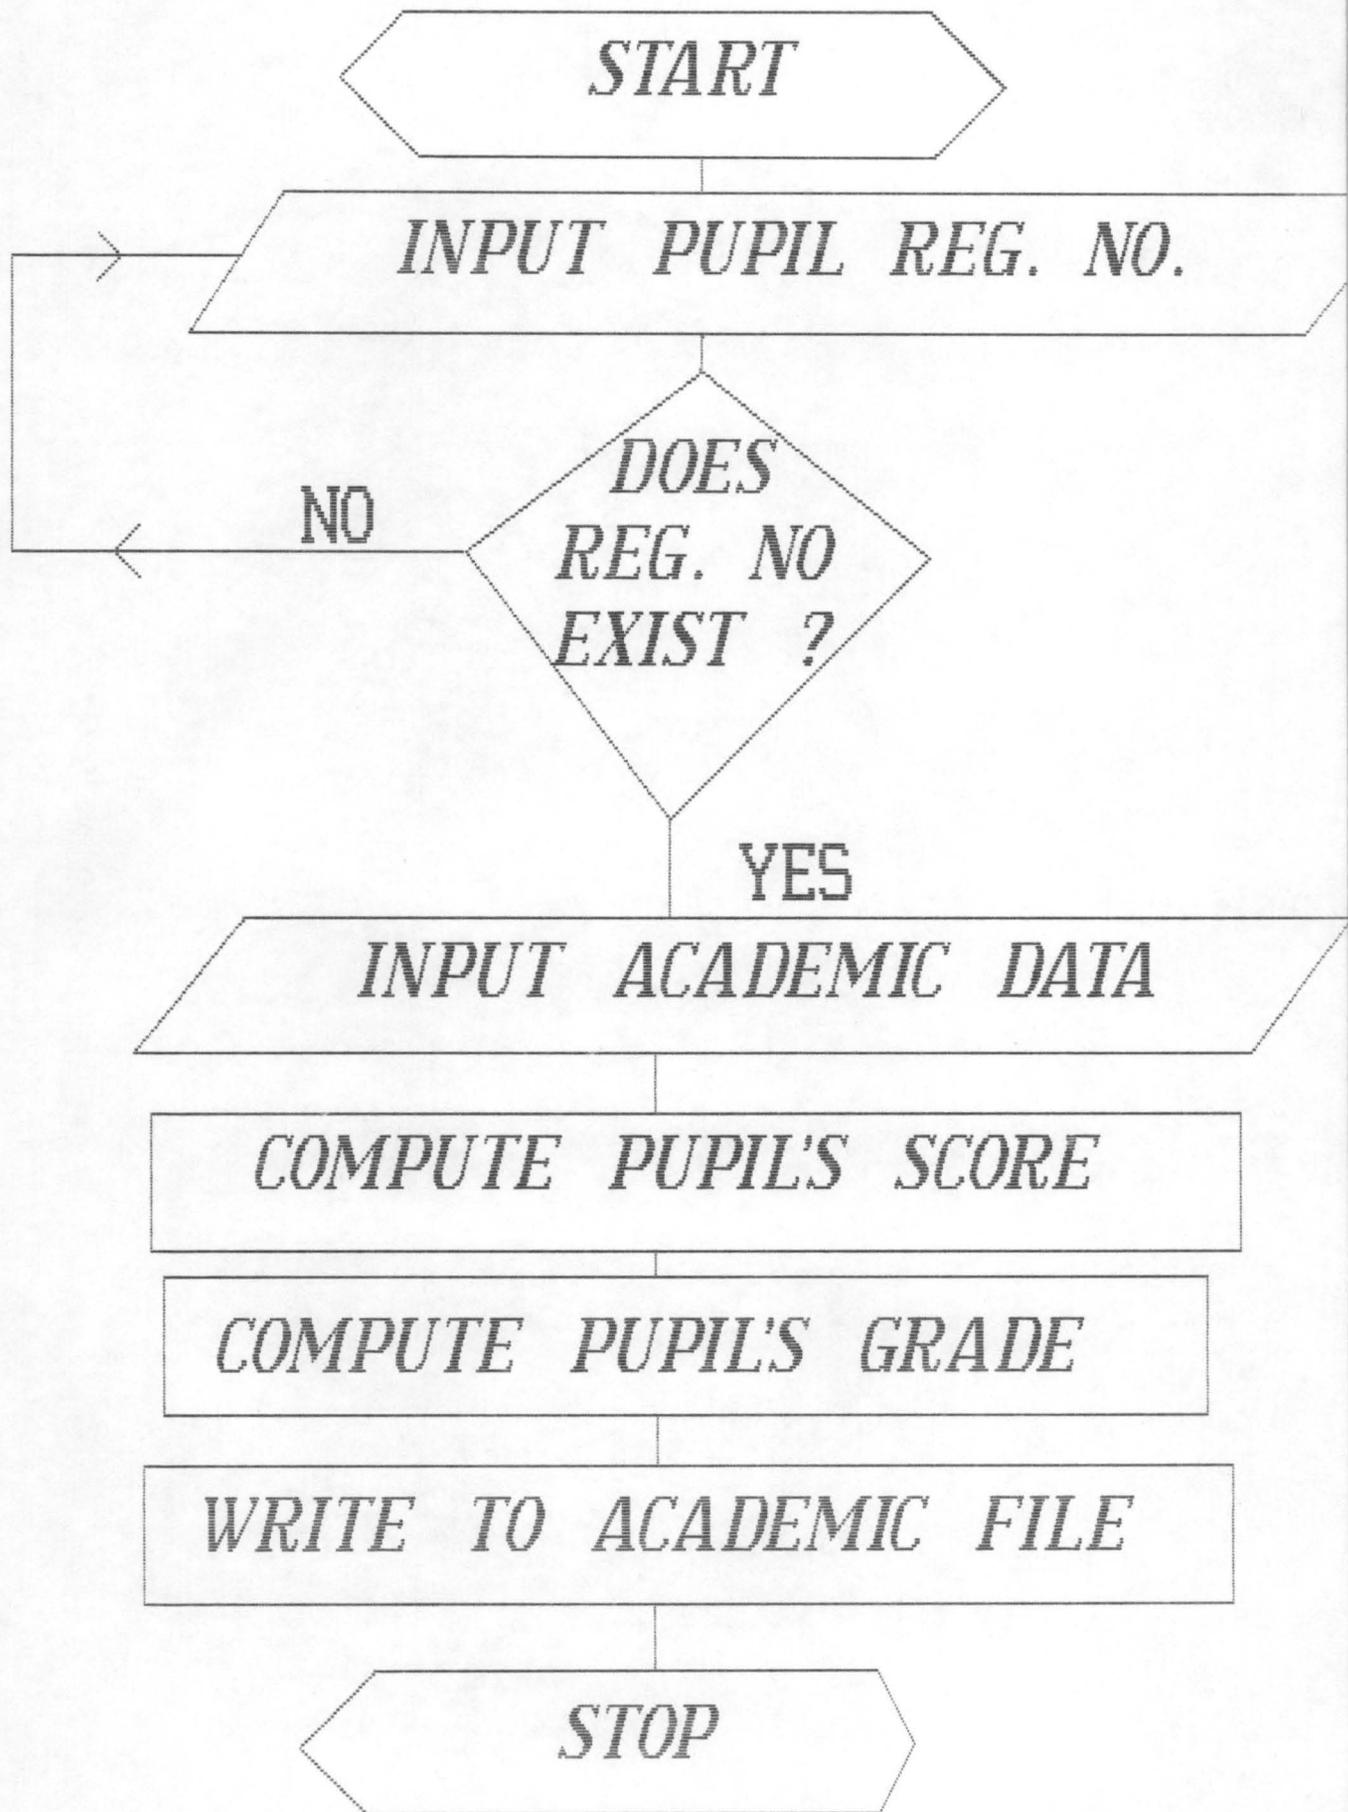

The processing specification is a description of the capturing of information into the three dbase file maintained by the system. The following flow diagrams pictorially presents the processing specification of the designed system:

*FIG. 4 FLOW DIAGRAM FOR STAFF RECORDS*

**FIG. 5** FLOW DIAGRAM FOR PUPILS PERSONAL RECORDS

*FIG. 6 FLOW DIAGRAM FOR PUPILS ACADEMIC RECORDS.*

## CHAPTER FIVE

### SYSTEMS OPERATIONS

#### 5.0 SYSTEMS REQUIREMENTS

The efficiency of operation of the proposed system is enhanced by an adoption of appropriate system configuration. For ease and effective utilization of the design system, the following configuration (hardware, software and peripherals) are recommended.

#### 5:1 HARDWARE REQUIREMENTS

The Hardware of a computer refers to the various mechanical, magnetic, electrical and electronic parts of the computer.

The more powerful the features of the hardware components, the better the utilization of the designed system. For the hardware requirements, a computer with the following specifications will be ideal:

- IBM AT or COMPATIBLE (Comprising)
- . 80 386 INTEL PROCESSOR
- . 20 MHZ OF SPEED
- . 640 KB RAM
- . 40 MB HARD DISK
- . 1.2 MB (5¼") FLOPPY DISK DRIVE
- . 1.44 MB (3 ½") FLOPPY DISK DRIVE
- . VGA ADAPTOR
- . 14" VGA MONITOR
- . ENGLISH KEYBOARD (101 KEYS)

## 5:2 SOFTWARE REQUIREMENTS

The software of a computer system is a collection of programs that are responsible for the controlling of the activities of the computer. The software requirements that are essential for the operation of the proposed system are as follows:

- DISK OPERATION SYSTEM: MS DOS 3.3 or HIGHER VERSIONS
- DATABASE MANAGEMENT SYSTEM PACKAGE (DBMS): DBASE 3+

## 5:3 PERIPHERAL EQUIPMENT REQUIREMENTS

### (i). PRINTER

A printer is essential in obtaining hard copies of reports. In view of this, the printing mechanism mentioned below will satisfy the printing requirements:

- . A FAST DOT MATRIX PRINTER: EPSON LQ 1050 OR EQUIVALENT.

### (ii). UNINTERRUPTED POWER SUPPLY (UPS)

In order to avoid unnecessary interruption of power supply, which may eventually lead to loss of information. An uninterruptible power supply system (UPS) of about 500 VA will suit the purpose of this system.

Accusition of Backup equipments is recommended to this effect. Two numbers of equipment indicated in 5.1, 5.2 and 5.3 are recommended.

#### 5:4 COST ANALYSIS OF THE SYSTEM

The estimated cost for implementing the designed system is as shown below:

(1) HARDWARE (with the following components)	N50,000.00
(a) 386 MICRO PROCESSOR (VGA)	
(b) 640 KB RAM	
(c) 40 MB HARD DISK	
(d) 1.2 MB 5¼ " FLOPPY DISK DRIVE	
(e) 1.44 MB 3½" FLOPPY DISK DRIVE	
(2) IMPLEMENTATION (Installation)	N7,000.00
(3) MAINTENANCE	N5,000.00
(4) DOT MATRIX PRINTER	N22,000.00
(5) STATIONERIES	N3,000.00
(6) UNINTERRUPTED POWER SUPPLY (UPS)	N18,000.00

#### 5:5 NARRATIVE PROCEDURE FOR USING THE SYSTEM

The system has been designed in such a way that not much knowledge of computer is required of the user. The following presents an instructional steps for operating the system:

At the C> (Prompt)

Type C> USSRS

This automatically loads the Computer Assisted record Management package. Then press any key to continue, Immediately the screen display a message: "ENTER PASSWORD" ( )

The user is at this point required to enter the password:

If an incorrect Password is entered

An error message "attempt by illegal user aborted" is displayed on the screen.

However if the password is correctly entered

The user will be allowed entrance into the working area by a screen display showing the main menu of the system.

The main menu of the system is as shown on screen 1 below.

UNIVERSITY STAFF SCHOOL						
COMPUTER-ASSISTED RECORDS MANAGEMENT SYSTEM						
						DATE : 02/10/92
STAFF	PUPILS	ACADEMICS	COMPUTATIONS	ON-SCREEN	REPORTS	EXIT
NEW RECORDS MODIFY VIEW/DELETE LIST EXIT						
OR AND PRESS ↵						

ADD NEW STAFF RECORDS

The main menu as shown is comprised of:

- (i) STAFF MENU
- (ii) PUPILS MENU
- (iii) ACADEMIC MENU
- (iv) COMPUTATIONS MENU
- (v) ONSCREEN MENU
- (vi) REPORT MENU
- (vii) EXIT MENU.

#### STAFF MENU

When staff menu is chosen, the following sub-menus are displayed under it:

NEW RECORDS; MODIFY; VIEW/DELETE; LIST; EXIT

- (1) NEW RECORDS: This option allows new entry of staff records
- (2) MODITY: Already existing information of staff can be ammended and updated accordingly using this option.
- (3) VIEW/DELETE: The view, enables the user to see the components of each staff record already existing, while the Delete allows information to be deleted.
- (4) LIST: This option allows for the listing of all the staff records in the database file.
- (5) EXIT: The exit option takes the user back to the main menu.

## PUPILS MENU

The pupils menu is comprised of the following options:  
NEW PUPILS; MODIFY; VIEW/DELETE; LIST AND EXIT.

These options perform similar functions as the option of the staff menu, except that they apply to the pupils.

## ACADEMIC MENU

The ACADEMIC menu comprises of:

NEW-CLASS; MODIFY CLASS; NEW SUBJECT; ADD RESULTS MODIFY RESULTS and EXIT.

- (1) NEW CLASS: New class codes or sections are stored by means of this option.
- (2) MODIFY CLASS: This option allows the user to modify the class section
- (3) NEW SUBJECTS: New subject names are allowed to be appended to the record on choosing this option.
- (4) ADD RESULTS: The pupils Continious Assessment and Exam Scores are entered into the SUBJECT FILE with the ADD RESULT option.
- (5) EXIT: This option takes the user back to the main menu.

## COMPUTATION MENU

This menu deals with all the necessary computations regarding the pupils performance in all the subjects offered. The sub-menu under the menu are:

ONE CLASS/SUBJECT; ALL CLASSES/SUBJECT; ALL CLASSES AND SUBJECT  
EXIT.

- (1) ONE CLASS/SUBJECT:           this option allows the user to compute the results of a particular class for a particular subject.
  
- (2) ALL CLASSES/SUBJECT:       This option allows computation for a particular subject across all the classes available in the school.
  
- (3) ALL CLASSES AND SUBJECT:   With this option results for all subjects of all classes are computed.

## ONSCREEN MENU

The ONSCREEN MENU allows all records concerning the staff or pupils to be listed on the screen for on-line viewing. This options that can be selected on the onscreen menu are:

STAFF DATA; PUPILS DATA; CLASSES; SUBJECT; CLASS RESULTS;  
SUBJECT RESULTS; INDIVIDUAL RESULT and EXIT.

With this menu the staff record, pupils record and their relative fields could be listed on the screen for on-line viewing or report generation.

## REPORTS MENU

The REPORT MENU allows the user to generate a comprehensive report on all the options of the onscreen menu. This report could be in the form of printed reports or visual reports.

## EXIT MENU

This option takes the user to the operating system dot prompt.

## CHAPTER SIX

### 6:1 CONCLUSION

Virtually all aspects of human endeavour has been taken over by computer. There is no limitation to the work a computer can perform. In this vein, this system has been designed to go in line with this trend.

The design and development of this project was based on information gathered from the University Staff Primary School. Also the system design will effectively take care of the inadequacies and inefficiencies of the manual method of processing.

The system has been tested and found to function effectively according to the requirements expected of it; and can therefore be fully implemented if so desired.

There is no doubt that the implementation of this system will offer unique advantages over the present manual system of record processing in the University Staff School.

However, in this research I wish to recommend, that a most cost effective implementation approach would be that of retraining an existing staff to master the overall operations of the computer base system. In this way the cost of recruiting a new staff would have been averted.

A further recommendation is that, towards achieving an effective security, control of the computer base system, the operation of the system should be based under the direct supervision of the Headmistress.
