

AGRICULTURAL SOCIETY OF NIGERIA (ASN) THANNUAL CONFERENCE PROCEEDINGS

STRENGTHENING AGRICULTURE FOR FOOD AND NUTRITION SECURITY, MARKET DEVELOPMENT AND EXPORT IN A CLIMATE CHANGE ENVIRONMENT

MATA ZUES

DATE

23rd - 27th October, 2023.

VENUE:

FEDERAL UNIVERSITY OF LAFIA,

NASARAWA STATE, NIGERIA

FOITORS:

AJAYI, F. A., RAHMAN, S. A., USMAN, A., IBRAHIM, A. J., ADEJOH, S. O., KANA, H. A., OKUNSEBOH, S. A., OGAH, G. O., ZAKNAYIBA, D. B. AND OKOYE, B. C.

AGRICULTURAL SOCIETY OF NIGERIA (ASN),

57TH ANNUAL CONFERENCE PROCEEDINGS

THEME:

STRENGTHENING AGRICULTURE FOR FOOD AND NUTRITION SECURITY, MARKET DEVELOPMENT AND EXPORT IN A CLIMATE CHANGE ENVIRONMENT

"LAFIA 2023"

DATE: 23rd - 27th October, 2023.

VENUE: FEDERAL UNIVERSITY OF LAFIA, NASARAWA STATE, NIGERIA

EDITORS:

AJAYI, F. A., RAHMAN, S. A., USMAN, A., IBRAHIM, A. J., ADEJOH, S. O., KANA, H. A., OKUNSEBOH, S. A., OGAH, G. O., ZAKNAYIBA, D. B. AND OKOYE, B. C.

EFFECTS OF FARMER -PASTORALIST CONFLICTS ON EXTENSION SERVICE DELIVERY IN NIGER STATE, NIGERIA

*S. Jibrin¹, A. Abdullahi¹, Y. Mohammed¹, A. Umaru² and M. Mustapha¹¹Dept. of Agricultural Extension and Rural Development, FUT Minna, Niger State, Nigeria. ²Dept. of Agricultural Economics and Extension Services, IBBU, Lapai Extension *Corresponding author's email address: safiya.jibrin@futminna.edu.ng/safil4real@gmail.com (07030648457)

PROCEEDINGS OF THE 57th Annual Conference of the Agricultural Society of Nigeria 23rd – 27th Oct., 2023

ABTRACT

The study investigated the effects of farmer-Pastoralist conflict on agricultural extension service delivery in the study area. Data were collected primarily by administering questionnaires to 50 respondents. Data were analyzed using descriptive statistics. Results of the study shows that average age and years spent in school were 35 years and 10 years while the major perceived causes of conflicts include increased pressure on land ($\bar{X} = 4.56$), Search for water and pastures ($\bar{X} = 4.10$) and population growth. More so, results from the study also showed that the effects of farmer-Pastoralist make extension work difficult ($\bar{X} = 4.42$, delay in completion of extension work ($\bar{X} = 4.38$) and monitoring farmers progress becomes difficult ($\bar{X} = 3.32$). Constraints faced by extension agent were bad road ($\bar{X} = 4.34$), Re-occurrences of farmers-Pastoralist conflicts ($\bar{X} = 4.1$) high cost of transportation ($\bar{X} = 3.86$) and inadequate cooperation from community leaders ($\bar{X} = 3.22$). The study recommends that government should adopt policies that would tackle the causes of farmer-pastoralist conflict in the study area especially in the case of land control measures, provision of basic infrastructural facilities such as roads, water points and ranches in the study area in other to facilitate effective communication, implementation and functioning of extension workers. There is also need to set up reconciliation committees in the communities.

Keywords: Conflicts, Farmer-pastoralist, Extension services, Extension agents and Farmers

INTRODUCTION

Agricultural extension is a science of social change with the basic purpose of increasing farmer's productivity through efficient production. It therefore emphasized among other things like the use of fertilizer, improved seed and chemicals. Agricultural extension services assist farm people through educational procedures, improving farming methods and technique increasing production, efficiency and income satisfying their levels of living and lifting the social and educational standard of living a rural life. Pastoralism often has mobile aspects but can take many forms and be at different scales. The increase in pressure resulting from resource degradation and scarcity natural resources has aggravate the situation of competition between farmers and pastoralists. In the area where the two-production system interacts, both communities are increasingly considering the option of expansion to each other's holding. As a result, conflicts are getting recurrent and intensified in many parts of the country, this is supported by Blench (2003) that farmer pastoralist conflicts are increasing both in terms of recurrent and intensity. The farmer- Pastoralist conflict is one of the most complex social problems affecting Nigeria's survival as it has direct impact on the survival of those involved who the country depends heavily on, in terms of provision food and raw materials for industry and export in order to meet ever-growing demands.

<u>able 1: Socio-economic characterist Variables</u>	Frequency	Percentage (%)	Mean

Source; Field survey, 2019.		20.0	

Socio-economic characteristics of respondents

The mean age was 35 years. This agrees with the findings of Ezeh (2013) who reported that age range of extension agents is between 40-60 years. Table 1 further revealed that, male respondents accounted for 72% and 28% were female. The involvement of more male as extension workers may probably be due to the cultural and religious belief of the rural people (especially in Northern Nigeria) which tends to restrict women to household domestic chores. The findings also shows that 58% of respondents had attained tertiary level education, 20% had attained secondary level education, while 16% attained non-formal and very few 6% attained primary level education. The level of education of extension agents agrees with the findings of Ezeh (2013) who found out that the majority of extension agents completed post-secondary education.

Table 2: Extension service rendered by the respondent

Extension service rendered by the respondent

Results on Table 2, shows that services rendered by the extension officers among other are education of farmers $(\bar{X}=4.62)$, Training of farmers on new practices $(\bar{X}=4.54)$, teaching farmers to improve productivity $(\bar{X}=4.50)$, creating awareness on possible new techniques $(\bar{X}=4.48)$, Provision of advisory services $(\bar{X}=4.46)$ and promotion of environmentally friendly $(\bar{X}=4.39)$.

Respondent perceived causes of conflicts

The farmer- Pastoralist conflict is one of the most complex social problems affecting Nigeria's survival as it has direct impact on the survival of those involved who the country depend heavily on, in terms of provision food and raw materials for industry and export in order to meet ever-growing demands In the study area, the causes of conflicts are increased pressure on land (\bar{X} = 4.56), Search for water and pastures (\bar{X} =4.1), Population growth (\bar{X} =3.96). Audu (2013) who opined that about half of the land conflicts are over boundaries that occur mainly with neighbors or relatives who live close by, decrease in water availability as a result of changes in global climatic conditions and migration of herdsmen. In the past five years, it appears that there are more conflicts related to land sales. As the value of land increases due to population pressure, agricultural commercialization, and urbanization, it is expected that the land sales market will develop over time. However, if property rights are not clearly defined, there could be more cases of land conflicts related to land sales.

Table 4: Effect of farmer-pastoralist conflict on Extension service delivery

Effects of conflicts	SA	A	UD	DA	SD	WS	WM	Rank
Extension work becomes difficult	26(130)	21(84)	2(6)	0(0)	1(1)	221	4.42	1 st

The Effects of Conflicts on Extension Services Delivery

Table 4 shows that conflicts affect extension services delivery (\bar{X} =4.42), causes delay in completion of extension work (\bar{X} =4.38), difficulty in monitoring farmer (\bar{X} =4.32), destruction of mutual trust between farmer and pastoralist (\bar{X} =4.24), Programme evaluation becomes difficult(\bar{X} =4.2), reduce turn-over of extension worker (\bar{X} =4.06), extension agent abandon work (\bar{X} =3.98), and hampers cooperative activities(mean=3.96),

Table 5: Socioeconomic loses among respondents as a result of conflict

Variables	Frequency*	Percentages (%)	3 4
Loss of lives	20	14.59	
Loss of animals	33	24.08	
Loss of properties	33	24.08	
Migration	13	10.21	
Reduction in crop production	37	27.00	

Source; Field survey, 2019 *Multiple Responses Recorded

Socioeconomic loses among respondents as a result of conflict

The result shows that 14.49% of the respondents agreed that there was loss of lives during conflict, while 24.08% accepted that there was loss of animals and properties during the conflict. Finding of this study is in line with the studies of Aliyu (2015): Burton (2016). who reported that loss of lives and properties are some of the characteristic features of farmer-herders conflict. Also, Adeoye, (2017) reported that herders-farmers clashes over cattle destruction of crops; farmers' encroachment on grazing reserves and indiscriminate bush burning by nomads usually leads to loss of crops
