#### FOREWORD & ACKNOWLEDGEMENTS

It is with immense pleasure and great pride that we welcome all participants, esteemed colleagues, and distinguished guests to the 7th Edition of the \*International Conference on Research in Applied Mathematics and Computer Science (ICRAMCS 2025). Organized by Cadi Ayyad University and held at the National School of Applied Sciences (ENSA) of Marrakech, this edition marks another milestone in our continuous effort to foster international scientific collaboration and promote cutting-edge research at the crossroads of applied mathematics and computer science.

This year, ICRAMCS 2025 has brought together scholars and researchers from **28 different nationalities**, reflecting the global reach and reputation the conference has acquired over the years. We are deeply honored by the presence of all participants who have joined us from around the world to share their expertise, ideas, and passion for scientific advancement.

We extend our heartfelt gratitude to our **keynote speakers** whose insights and academic excellence have greatly enriched the scientific program:

- Prof. Ayman ALZAATREH, American University of Sharjah, UAE
- Prof. Mahamat Saleh DAOUSSA HAGGAR, University of Ndjamena, Chad
- Prof. Sandra FERREIRA, University of Beira Interior, Covilhã, Portugal
- **Prof. Cemil TUNC**, Van Yuzuncu Yil University, Van, Turkey

Their contributions reflect the diversity and high caliber of thought leadership present at this edition of the conference.

Our sincere thanks go to the **organizing committee**, whose tireless work, dedication, and logistical coordination made this event possible. Their passion and commitment ensured the success of every detail, from the academic program to the welcoming environment.

We are also profoundly grateful to the scientific committee for their

rigorous evaluation of submissions, ensuring that only the most promising

abstracts were selected. This has contributed significantly to maintaining the

academic rigor and credibility of ICRAMCS.

We appreciate the support of our institutional partners and sponsors,

whose commitment to scientific excellence and international cooperation

has been invaluable in the realization of this event.

Last but not least, we thank all participants, whether attending in person or

online, for their enthusiasm, intellectual curiosity, and active engagement.

Your contributions foster meaningful exchanges, spark new collaborations,

and reinforce the global scientific community we are proud to be part of.

We look forward to future editions and hope that ICRAMCS 2025 serves as a

memorable and inspiring experience for all. May this conference pave the

way for new discoveries, long-lasting partnerships, and impactful

innovations in applied mathematics and computer science.

Sincerely,

\_\_\_\_\_\_

On behalf of the Organizing Committee of ICRAMCS 2025

## FEATURE RANKING WITH RELATIVE BELIEF: A BAYESIAN FILTER METHOD FOR MIXED-TYPE FEATURES IN CLASSIFICATION PROBLEMS

American University of Sharjah, Sharjah, UAE aalzaatreh@aus.edu

#### **Abstract**

Feature selection is a crucial step in data mining and machine learning applications, particularly when dealing with high-dimensional datasets. It helps mitigate the curse of dimensionality, improve model performance, and reduce computational complexity. Among the available approaches, filter methods stand out for their efficiency, as they evaluate the relevance of features independently of the learning algorithm. In this talk, we present a Bayesian filter-based feature selection method based on the Relative Belief Ratio. This approach is employed to rank and select quantitative features based on the strength of evidence they provide in relation to the target variable, without requiring access to the learning model. The method is applied to both binary and multi-class classification problems. Additionally, the approach is extended to handle qualitative features, enabling a broader application of the proposed filter method in real-world datasets where non-numeric attributes are common. Several benchmark datasets are used to validate the effectiveness of the proposed method, showcasing its robustness and scalability in diverse classification settings.

#### A MATHEMATICAL MODEL FOR INVESTIGATING THE THERAPEUTIC RESPONSE OF REPAGLINIDE AND METFORMIN IN TYPE 2 DIABETES PATIENTS

University of NDjamena, NDjamena, Chad msdhaggar@gmail.com

#### **Abstract**

In recent decades, several mathematical models of the glucose-insulin system have been developed to study the complications of diabetes and to diagnose and treat the disease by predicting outcomes. However, in this work, we focus on the interaction between two drugs used in the treatment of type 2 diabetes when lifestyle measures alone are insufficient to control blood glucose levels: metformin and repaglinide. Initially, we combine these two treatments using a new approach of a mathematical model of the glucose-insulin system that integrates the effects of these drugs. The model parameters are then estimated using an inverse optimization problem and available data. The response of metformin and repaglinide in type 2 diabetes patients is investigated through numerical simulations. The results show an increase in glucagon and insulin concentrations, as well as a decrease in glucose concentrations in the heart, tissues, and liver. These findings support the mechanism by which repaglinide lowers blood glucose levels by stimulating insulin release from the pancreas, while metformin helps reduce blood sugar by improving the body's response to insulin.

## EXTENDING THE WEIBULL DISTRIBUTION FOR NON-MONOTONE FAILURE RATES

University of Beira Interior, Covilhã, Portugal sandraf@ubi.pt

#### **Abstract**

The widespread use of the Weibull distribution in reliability and survival analysis has led statisticians to seek improved models that can handle data exhibiting non-monotone failure rates. As the typical Weibull distribution is somewhat limited, as it can only model hazard functions that are monotonically increasing or decreasing, in this talk we present an extension to obtain failure rates with bathtub-shaped and unimodal showing that this extension offers flexibility compared to the traditional Weibull distribution and it is especially useful when we are working with real-world data that might not fit the simple assumptions of the Weibull distribution. This presentation is substantiated by model comparisons and graphical illustrations that complement the theoretical foundation. The interest of the recommended distribution is confirmed through a real data set.

#### UNIQUE SOLUTIONS FOR INTEGRAL EQUATIONS, INTEGRO- DIFFERENTIAL AND CAPUTO FRACTIONAL DIFFERENTIAL EQUATIONS WITH DELAY: PROGRESSIVE CONTRACTIONS

Van Yuzuncu Yil University, Van, Turkey cemtunc@yahoo.com

#### **Abstract**

In this study, first we handle nonlinear integral and integro-differential equations with delay. We investigate global existence and uniqueness of solutions of the considered equations by fixed point method using progressive contractions of T.A. Burton. We prove some new results including sufficient conditions with regard to global existence and uniqueness of solutions of the considered equations. We provide an example for illustrations.

Second, we handle a nonlinear Caputo fractional differential equation (CpFrDE) including multiple variable delays. We study uniqueness of the solutions of the CpFrDE under consideration. Here, we apply the method of progressive contractions on CpFrDEs including multiple variable delays. The vital point of the method of progressive contractions is that it is a very flexible idea to discuss the uniqueness of solutions for various mathematical models. We also provide an example to demonstrate how the outcome can be applied.

The present study has new contributions to the qualitative theory of integral and integro-differential equations and fractional differential equations.

acceptance of the E-Takwine online learning platform using the TAM model	
EL FATMI ABDELHAKIM, BEKRI M. ALI, Enhancing the T-Coffee Method for RNA Sequence	321
Alignment through the Divide and Conquer Principle	
EL HADDAD KHADIJA, BEKKARI AISSAM, BOUARIFI WALID, JRAIFI ABDELILAH, Medical image	322
analysis using machine learning models	
AIT HAMMOU NAJIA, MOUSANNIF HAJAR, LAKSSIR BRAHIM, EL AISSAOUI ABDELLAH, Efficient	323
Lane Detection using Mobile U-Net Model	

HANAN SABBAR, SILKAN HASSAN, ABBAD KHALID, BELLFKIH EL MEHDI, Enhancing Thoracic Disease Classification Using YOLOv8n-cls: A Lightweight Deep Learning Approach	324
HTITI MOHAMED, AKHARRAZ ISMAIL, AHAITOUF ABDELAZIZ, A Novel Image Encryption Scheme	325
Combining Hill Cipher and One-Dimensional Chaotic Map  AMEUR MERYEM, CHAJRI YASSINE, DAOUI CHERKI, IDRISSI NAJLAE, Some Stationaries Markov	326
models	320
GANMATI MERIEM, CHAMLAL HASNA, OUADERHMAN TAYEB, Co-clustering methods: An	327
experimental review	
ABOUDRAR YASMINE, Enhancing Firewall Log Analysis with Deep Learning: A Novel SIEM Architecture for Threat Detection	328
ZMAIMITA HICHAM, MADANI ABDELLAH, ZINE-DINE KHALID, Intrusion Detection System using	329
ML and DL approaches: A Systematic literature review	
AIT ZAOUIAT CHARAFEDDINE, EDDABBAH MOHAMED, ELGHAZOUANI MOHAMED, AZIZ LAYLA,	330
Optimizing Performance and Security in Invasive Cardiac IoMT with MQTT, CoAP, and Encryption	
Protocols	
ZINNANE FATIMA, FERNANE MONSIF, MADANI ABDELLAH, A literature review on OWL-based	331
biomedical ontologies for Clinical Information Management	
ABDELBAKI MOHAMED, Automated Machine Learning for Healthcare: A Meta-Learning Approach to Algorithm Selection	332
RKHOUYA SAFA, CHOUGDALI KHALID, Enhancing Malware Detection with Deep Learning: A Study	333
on AI-Driven Security Solutions	333
GAZEHI WEJDEN , LOUKIL RANIA , BESBES MONGI, A Comparative Study of Boosting Algorithms	334
for the Classification of Nanoparticle Properties	
OUDIKA AYOUB, MOUADI HASSAN, KARIM DRISS, The F-limit of a Sequence of Prime Ideals	335
ETTAJER EL HOUCINI, ABOUFADIL YOUSSEF, THALAL ABDELMALEK, Conception numérique des	336
motifs géométriques de Zelliges marocains	
ELLAKY ZINEB, MATRANE YASSIR, SENNAD MERIEM, BENABBOU FAOUZIA, New Solutions for	337
Evolving VoIP Threats: Enhancing the Security of Asterisk PABX	
RAFIQ JAMAL EDDINE, ZAKRANI ABDELALI, NOUH SAID, A Hybrid Machine Learning and	338
Generative AI Model for Predicting Academic Performance from Learning Traces	
ELHADARI ZOUHAIR, ZOUGAGH HICHAM, IDBOUFKER NOUREDDINE, ECH-	339
CHEBABY MOHAMED, A Blockchain-IoT Framework for Transparent Food Supply Chains in Urban	
Quick-Service Restaurants	0.40
SLIMAN MOHAMED, BESBES MONGI, BEDIOUI NEILA, Assessing Integration Orders for SARIMA	340
Modeling: Tunisia Gas Demand Forecasting LIICHI SALMA, AZMANI ABDELLAH, KOUNAIDI MOHAMED, BOUKROUH IKHLASS, A Comparative	341
Study of Similarity Metrics for SVM-Based Recurrent Ticket Prediction	341
ABOUFADIL YOUSSEF, ETTAJER EL HOUCINI, THALAL ABDELMALEK, Modélisation informatique	342
des pavages Quasi-périodiques dans l'art des zelliges marocains	312
SAKHI HASNAE, EL FILALI SANAA, Enhancing Dialectal Sentiment Analysis: Contextual	343
Transcoding and Sentence Optimization Using Genetic Algorithms	
RAFI NAJAT, BOUZKOURA KHADIJA, CHILLALI ABDELHAKIM, Navigating the Future of	344
Cryptography: Opportunities and Challenges in the Age of AI and Quantum Computing	
MALLOUK OTMANE, JOUDAR NOUR-EDDINE, ETTAOUIL MOHAMED, A Novel Optimization Model	345
for Transfer Learning in Convolutional Neural Networks	246
SOW DEMBA, DIOP MADICKÉ, Performance evolution between ECGenELGAMAL and EdGenELGAMAL	346
ABOURABIA IMADE, OUNACER SOUMAYA, EL GHOUMARI MOHAMMED YASSINE,	347
AZZOUAZI MOHAMED, Prediction of agricultural yields in Morocco using a hybrid algorithm:	34/
112200121 Profiterior, Fredection of agricultural yields in Profecto using a hybrid algorithm.

# Comparison of Bayesian and Frequentist Approaches in Nominal Item Response Theory Modelling

#### **Communication Info**

#### Author:

Olayiwola Matthew ADETUTU

Federal University of Technology, Minna, Nigeria

#### **Keywords:**

- (1) Bayesian
- (2) Frequentist
- (3) Nominal

#### **Abstract**

The research utilized a non-linear regression model to quantify unobserved characteristics of candidates in examinations and their outcomes [1]. Performances of Bayesian over Frequentist approaches in estimating nominal item response theory model parameters  $\exp\left\{a_{ik}(\theta_j - b_{ik})\right\}$  $P(y_{ij} = k | a_i, b_i, \theta_j) \frac{\exp\{a_{ik}(\sigma_j - \nu_{ik})\}}{=\sum_{h=1}^4 \exp\{a_{ih}(\theta_j - b_{ih})\}},$  $\theta_i \sim N(0,1)$  [2]. Priors  $a_{ik} \sim dnorm(m.a, pr.a)I(0,0), b_{ik} \sim dnorm(m.b, pr.b),$  $m. a \sim dnorm(0,0.1), m. b \sim dnorm(0,0.1)$  $pr. a \sim digamma(10,1)$ and  $pr.b \sim digamma(10,1)$ were used to determine the posterior densities and Brooks-Gelman-Rubin Convergence Diagnostic Statistic suggested 10000 updates to have valid estimates of the intended parameters in accordance to [4]. Findings revealed that Bayesian technique gave positives, and item discriminating parameters with relatively low standard errors, and more confined credible intervals for the parameters' estimates in line with the principle of item response theory modelling [5].
